- Once the user decides to save the item they have a choice to have the app dress them or save into the many categories they get to create

- If the user press on one of the saved categories the app will make an outfit based on all saved items within that category and the User is able to press through the options or roll through another outfit with the refresh button.

The screen upon launching app

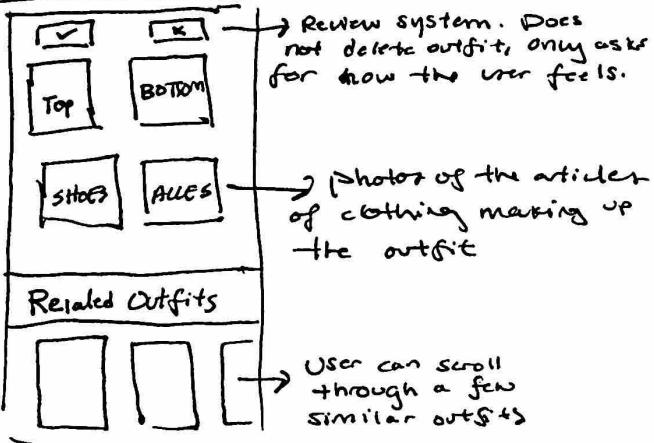

Upon swiping left

If user swipes left,
then it goes to their
closet, or their generated
card saved? > outfits

Upon clicking an outfit

Upon clicking an article of clothing
